

ISI-MAC corner-rate: analytical SCT vs NPD
 $h=0.3$, SNR=6 dB, Class C

Per-N numerical detail (errors / codewords)

N	SCT BLER	SCT errs/CW	NPD BLER	NPD errs/CW	SCT/NPD
16	0.15	4,500 / 30,000	0.16472	16,472 / 100,000	0.91
32	0.0526	1,578 / 30,000	0.06873	6,873 / 100,000	0.77
64	0.02853	856 / 30,000	0.03284	1,642 / 50,000	0.87
128	0.0059	177 / 30,000	0.0127	637 / 50,000	0.46
256	0.0013	13 / 10,000	0.00138	69 / 50,000	0.94
512	0.000433	13 / 30,000	0.000307	92 / 300,000	1.41
1024	4e-05	2 / 50,000	3.3e-05	20 / 600,000	1.21

Both decoders use Class C corner-rate path (decode U first, then $V|X$). SCT = 4-state ($X_{\{t-1\}}, Y_{\{t-1\}}$) FB $\rightarrow$ marginalize Y per position $\rightarrow$ scalar U -LLR $\rightarrow$ Arikan SC; stage 2 conditions on the decoded X . SCT uses MC-genie own design (50K-200K trials).
